

Rocky Shore Wildlife Wordsearch

You are likely to encounter more major groups of animals on a rocky shore than in any other habitat in Cornwall. For example, the pictures on the attached page include a sponge (Breadcrumb Sponge), an anemone (Beadlet Anemone), a bryozoan (Lacy Crust), a nemertean (Ribbon Worm), an annelid (Green Leaf Worm), molluscs (Grey Chiton, Banded Venus, Flat Periwinkle, Greater Facelina), crustaceans (Common Prawn, Sea Slater, St. Piran's Crab, Star Barnacle), echinoderms (Green Sea Urchin, Common Brittlestar, Seven-armed Starfish), tunicates (Light Bulb Sea Squirt, Star Ascidian) and fish (Cornish Clingfish, Shanny). All of these creatures can be found around the Cornish coast, but can you also find their names hidden in the wordsearch below? Names can be found in any of 8 directions: → ← ↑ ↓ ↗ ↘ ↙ ↚. Good luck!
